

School Management System

Features and investment proposal

Manage students, teaching, results and school fees in one connected platform, with secure access for management, staff, students and parents.

Choose the payment option that suits your school

One time implementation ₦1,000,000

Subscription ₦300,000 per academic term for up to 500 students

Subscription setup and onboarding included

The one time package provides a dedicated deployment. The subscription provides a school branded workspace on our managed platform, with hosting, backups, updates and standard support included. Detailed limits and costs are shown in this proposal.

Key Features

- Student Management
- Teacher Management
- Classes & Subjects
- Exams & Results
- Attendance Management
- Fees & Payments
- Reports & Analytics
- Parent Portal
- Announcements
- Timetable Management
- Admin & User Management
- Mobile Access & More!

Built to support everyday school operations

Publish approved results online, monitor outstanding fees, generate receipts and keep parents informed.

Additional included features cover online admissions, assignments, learning resources, promotion history and school website content.

Version 2.1 • 22 September 2026. Proposed offer for confirmation after discovery. All prices are in Nigerian naira.

This revised offer replaces all earlier package and subscription prices.

More features that make the difference

The following capabilities are included in both payment options within the agreed scope. They help the school move beyond basic record keeping.

- Student Portal — personal dashboard for results, assignments, attendance and fee balances.
- Multiple Children in One Parent Account — one verified guardian login for linked children.
- Online Admissions — application forms, document upload, review and enrolment.
- Online Fee Payments — Paystack checkout linked to the correct invoice.
- Automatic Receipts — downloadable numbered receipts after payment verification.
- Instalments and Scholarships — track part payments, approved discounts and outstanding balances.
- Payment Reminders — scheduled in portal and email reminders for outstanding fees.
- Result Approval Workflow — teacher submission, review and controlled publication.
- Digital Report Cards — branded printable PDF reports and access to past published results.
- Assignments and Learning Resources — publish tasks, receive submissions and share materials.
- Academic Progress Tracking — compare published performance across terms and subjects.
- Promotion and Graduation History — retain records when students change class or leave school.
- School Calendar — term dates, examinations, holidays and school events.
- School Website — up to eight agreed pages with editable news and school information.
- Data Import and Export — supplied spreadsheet templates and downloadable reports.
- Secure Access and Audit History — permissions, administrator MFA and records of key changes.
- Automated Backups — daily backups with an agreed restoration process.

Optional extensions

Library management, transport management, hostel allocation, inventory, staff leave, computer based tests, school email mailboxes and an external API are available as separately priced additions. They are not included in the ₦1,000,000 total or the standard subscription.

One time package and selectable pricing

Total development and implementation fee: ₦1,000,000. The allocation below allows your school to remove optional modules before signing. Each module is charged once; grouped features share the stated module price.

Code	Included module	Price ₦
M01	Admin, permissions, security and audit history	150,000
M02	Student and teacher management, import and promotion	100,000
M03	Classes, subjects, exams, results and report cards	150,000
M04	Student and parent portals with mobile access	100,000
M05	Fees, Paystack payments and automatic receipts	150,000
M06	Attendance and timetable management	60,000
M07	Announcements, calendar and payment reminders	50,000
M08	Reports, analytics and academic progress	50,000
M09	Online admissions	40,000
M10	Assignments and learning resources	40,000
M11	School website and content management	60,000
M12	Deployment, backup setup, migration and training	50,000

TOTAL ₦1,000,000

How feature selection works

M01 and M12 are required for every portal. Student based modules require M02. M04 displays only purchased modules. Payment reminders require M05; academic analytics require M03; attendance reports require M06. Security and payment verification controls cannot be removed independently.

Example: remove M09 online admissions and M11 school website. Revised one time price: ₦1,000,000 – ₦40,000 – ₦60,000 = ₦900,000. The remaining modules stay included.

Baseline: one school, one campus, up to 1,000 active students and 100 staff accounts. Guardian accounts are linked to enrolled students. Hosting and recurring provider costs are separate. Higher capacity, additional campuses and custom workflows require a revised quotation.

Subscription option

Start with a lower initial payment and use the same included features in a school branded workspace on our managed platform. Subscription access is licensed for the paid period; it does not transfer the platform source code.

Plan	Fee per term	Students	Setup
Term subscription	₦300,000	Up to 500	Included

The subscription is ₦300,000 per school per academic term for up to 500 active students. Payment is due before each term begins; term dates are agreed during onboarding. For a school operating three terms per year, the annual equivalent is ₦900,000. Setup and onboarding are included, with no separate setup fee. Usage charges and any applicable tax are excluded.

Included in the subscription

- All standard features listed in this proposal, including the school website and Paystack integration.
- One school and one campus with up to 500 active students and 50 staff accounts.
- School branded web address, up to 10 GB file storage and linked parent accounts.
- Managed hosting, HTTPS, daily backups with 30 day retention and platform updates.
- Initial import from the supplied templates and two remote staff training sessions.
- Standard support by email or a designated support channel during agreed business hours.

Charges and limits

There is no per parent account fee within the student limit. Paystack processing fees, text message credits, external email delivery usage, mailbox licences and a custom domain are separate. Limits are reviewed before adding more students, staff, storage or campuses; a revised price requires school approval. No automatic overage charge is proposed.

Renewal and cancellation

Renewals use the agreed plan and price. Proposed price changes require at least 30 days' notice before renewal. Cancel before the next renewal to stop future billing; access continues to the end of the paid period. Prepaid fees are not prorated after service starts, subject to the final agreement.

For overdue renewal, give a seven day grace period before suspension. The school owns its records and may export supported student, result and payment data during active service. Allow 30 days after closure to request an export before scheduled deletion, subject to the agreed retention requirements. Backup copies expire through the normal backup cycle.

What subscription does not include

Bespoke development, optional extensions, an uptime guarantee and round the clock support are separately scoped. Switching to a dedicated deployment is a separate project; subscription payments are service fees and do not automatically count toward a purchase.

Functional requirements

The following requirements define what the included features will do. Final layouts, grading rules and approval roles will be confirmed with the school before implementation.

FR01 Student and teacher management

Create and update records, use unique admission numbers, link guardians and assign teachers to classes and subjects. Validate spreadsheet imports and flag duplicate records. Preserve previous sessions when students are promoted, withdrawn or graduated. Teacher management covers profiles and teaching allocations, not payroll.

FR02 Academics exams and results

Configure sessions, terms, classes, subjects, assessment weights and grading bands. Teachers enter or upload scores only for assigned subjects. Reject out of range scores and flag missing entries. Move results through draft, submitted, approved and published states; retain a reason and audit record for later corrections. Deliver one agreed branded PDF report format. Computer based exam delivery is optional.

FR03 Portals attendance and timetable

Students see their own information; guardians see only verified linked children. Staff record daily attendance and authorised corrections. Create weekly class timetables and flag teacher or room conflicts. The portal works in mobile and desktop browsers; native apps, offline use and biometric capture are excluded.

FR04 Fees payments and receipts

Create class and term fee schedules, invoices, approved discounts and instalments. Verify manual cash or bank transfer payments before posting them. For Paystack, verify the transaction reference, amount, currency and invoice before updating balances. Pending or failed payments remain unpaid; repeated notifications must not duplicate receipts. Corrections use traceable reversals or adjustments.

FR05 Communication and learning

Publish announcements and calendar events to selected groups. Provide scheduled in portal and email fee reminders using agreed templates. Teachers publish assignments, receive files and record feedback. Text messaging requires separately approved credits; delivery is dependent on the provider. Live video lessons and WhatsApp automation are not included.

FR06 Admissions reports and website

Receive online applications and documents, record review decisions and convert accepted applicants into student records without duplicate entry. Report on enrolment, attendance, fees and published academic performance with permission controlled exports. Provide up to eight public website pages with editable content and news.

Security delivery and acceptance

Security and reliable records

Use role based permissions, secure password reset, administrator multi factor authentication, encrypted connections and restricted file uploads. Log sensitive record changes. Test that students cannot access other students' information and guardians cannot access unlinked children. Public website pages must not expose school records.

Configure daily backups and demonstrate one restore before handover. Confirm retention periods, school privacy notices and authorised users during discovery. Proposed performance testing covers ordinary portal requests under an agreed workload of 100 simultaneous signed in users; the target is 95% within three seconds, excluding external checkout and bulk exports.

Implementation and school inputs

Proposed one time delivery: 10–12 weeks after scope approval, initial payment and receipt of required records. Subscription onboarding: 2–4 weeks where the standard platform is available and no custom development is required; otherwise confirm an implementation date before taking payment. These are planning estimates, not a statement that a platform is already live.

The school provides branding, website content, clean student and staff data, fee schedules, grading rules and an authorised reviewer. Included migration covers current student and staff records within the chosen plan limit and one opening balance file. Historical result entry, paper scanning and extensive cleansing are separately quoted. Provide two remote training sessions of up to two hours each.

Acceptance checks

- Import totals match the approved source files and duplicate records are flagged.
- Sample results calculate correctly, drafts stay hidden and only approved results are published.
- A parent sees all linked children and no unrelated student records.
- Full and partial payments produce correct balances and uniquely numbered receipts.
- Failed, pending, repeated and delayed payment notifications produce the correct outcome.
- Attendance, timetable, admissions, assignments and notices complete the agreed sample workflows.
- Exports match the underlying records; a backup restores; staff complete training.

One time payment milestones

40% on scope approval: ₦400,000.

30% after accepted core demonstration: ₦300,000.

20% after completed user acceptance testing: ₦200,000.

10% on production launch and handover: ₦100,000.

One time delivery includes 60 calendar days of defect correction from launch. Hosting, domain renewal, ongoing maintenance, provider usage and payment processing are separate. Source code delivery and usage rights must be stated in the final agreement. Applicable taxes, if any, will be separately shown before acceptance. New requests require a written price and timeline agreement.

Optional additions

The following are indicative one time development or setup prices for the defined scope. They are outside the ₦1,000,000 package and standard subscription. Subscription compatibility and any additional recurring costs must be confirmed before ordering.

Addition	Defined scope	Price ₦
Library Management	Catalogue, borrowing, returns and overdue reports	100,000
Transport Management	Routes, vehicles and student allocation; no live GPS	150,000
Hostel Management	Room and bed allocation with occupancy reports	120,000
Inventory Management	Stock receipts, issues and low stock reports	100,000
Staff Leave Management	Requests, approval and leave balances; no payroll	80,000
Computer Based Tests	Objective questions, timed tests and automatic marking; no remote proctoring	200,000
School Email Setup	Up to 20 staff mailboxes on one domain; licences extra	40,000
Student Email Setup	Provision up to 500 eligible accounts; licences extra	75,000
External API	Read only student directory, published results and invoice status with scoped access and documentation	100,000

Possible future extensions

A school can later commission native mobile apps, biometric attendance, live vehicle tracking, full payroll, multi campus operations or third party accounting integrations. These require discovery and a separate quotation; they are not implied by “Mobile Access & More”.

Choose your offer

Payment option: ☐ ₦1,000,000 one time ☐ ₦300,000 per academic term

Modules removed from one time package: _____

Optional additions required: _____

Agreed setup or development fee: ₦_____

Agreed recurring fee and billing period: _____

Approved external charges and tax treatment: _____

Feature opt outs reduce the one time development price using the module table. Disabling a feature on the standard subscription does not reduce its fixed plan price; a different subscription package requires a separate agreement.

School discovery form

Please complete this form so we can confirm the school's requirements and final offer.
